

## TELink 700a Digital On Hold System

The TElLink® 700a is a digital on hold playback system that easily installs on most business phone systems. This technology allows our engineers to update new audio over a standard phone line directly connected to the unit. The TElLink comes standard with non-volatile high density flash memory for reliable trouble free playback over the company telephone system. Connectivity is versatile including fax-line sharing, voice-line sharing, and distinctive ring compatibility.

Ideal for clients broadcasting time sensitive information where accurate, fast delivery is essential, as well as the multi-location enterprise, where a hand free solutions is a must.
